Abstract

A grant was awarded to PPL EnergyPlus, LLC for two (2) 250kW Molten Carbonate Fuel Cells at Pepperidge Farm, Inc. on 9/30/03. Pepperidge Farm subsequently signed a contract for one 250kW fuel cell. A request was made and granted to apply the award for the second fuel cell to the Sheraton New York Hotel & Towers (see attached email).

This report discusses the first year of operation of a fuel cell power plant located at Pepperidge Farm, Inc., Bloomfield, Connecticut and a fuel cell power plant located at Sheraton New York Hotel & Towers, New York, New York. PPL EnergyPlus, LLC installed the plants under a contract with Pepperidge Farm and Starwood Hotels & Resorts Worldwide, Inc. Two DFC®300 fuel cells, manufactured by FuelCell Energy, Inc. of Danbury, CT were selected for the project.

The fuel cell located at Pepperidge Farm successfully operated from January 16, 2006 to January 15, 2007. The fuel cell located at Sheraton New York Hotel & Tower successfully operated from May 19, 2005 to May 18, 2006. This report discusses the performance of these plants during these periods.

Executive Summary

Pepperidge Farm's and **Sheraton New York Hotel and Towers'** decisions to contract for the use of a fuel cell at both the Pepperidge Farm Bloomfield facility, a 265,000 square foot bakery, and the Starwood Hotels and Resorts' 1,750 guest-room flagship hotel in New York City, respectively, reflects each corporations' commitment to managing energy costs, exercising environmental leadership, and leveraging innovative technologies to accomplish its energy and environmental goals. The Director of Energy at Starwood and Pepperidge Farm's Site Engineer were both interested in finding new energy cost reduction opportunities that could build on these industries' growing reputations for commitment to energy efficiency and environmental quality while exploring new technologies. This combination of goals positioned Pepperidge Farm and Starwood to value the prospect of installing a fuel cell as a demonstration project that could deliver on its commitment.

PPL EnergyPlus, LLC developed the project and Millennium Builders, Inc., a PPL company, was chosen as the general contractor for the Pepperidge Farm project and Trystate Mechanical, Inc., a PPL company, was chosen as the general contractor for the Starwood project. Millennium Builders and Pepperidge Farm worked very closely with Connecticut Light and Power (CL&P) and Connecticut Natural Gas Corporation (CNG) to assure integration of the fuel cell with the local utilities. Trystate Mechanical and Starwood worked very closely with Con-Edison to assure integration of the fuel cell with both gas and electric utilities.

Both 250 kW molten carbonate fuel cells (MCFC) and the balance of their plants are contained in all-weather containers. The Pepperidge Farm fuel cell was connected to run in parallel with the grid and will not run in the island mode when the grid goes down. The fuel cell produces 250 kW of power and up to 300,000 Btu's of heat each hour. The heat output is connected to the bakery's boiler make up system. The power from the fuel cell is distributed at 480 volts and connected to one of the five main services feeding the facility. The Starwood fuel cell was connected to run in parallel with the grid and in the island mode when the grid goes down. The fuel cell produces 250 kW of power and up to 300,000 Btu's of heat each hour. The heat output is connected to the hotel's domestic hot water system serving 22 of the 56 floors. The power from the fuel cell is distributed at 480 volts and transformed down to 208 by existing transformers to feed the hotel's loads.

Seventy-five (75%) percent reimbursement of installed costs was made through the Connecticut Clean Energy Fund for the Pepperidge Farm fuel cell. New York State Energy and Research Development Authority (NYSERDA) provided 55% reimbursement of installed costs for the Starwood fuel cell. The Department of Energy provided an additional \$250,000 grant under the Department of Defense fuel cell buy down program for each fuel cell, respectively.

PPL started testing the Starwood fuel cell on May 19, 2005 and the Pepperidge Farm fuel cell on January 16, 2006. Final acceptance of the Starwood fuel cell was completed on May 23, 2005 and the Pepperidge Farm fuel cell on January 23, 2006. Following several months of start-up activities, a high availability factor and few operating difficulties have marked operations during the first year.

1.0 Introduction

This report covers the first year of operation of a fuel cell power plant installed by PPL EnergyPlus, LLC (PPL) under a contract with **Pepperidge Farm** and installed at the facility in Bloomfield, Connecticut. The project had the support of the Connecticut Clean Energy Program and the Department of Energy (DOE). The report also covers the first year of operation of a fuel cell power plant installed by PPL under a contract with Starwood Hotels & Resorts Worldwide, Inc and installed at the **Sheraton New York Hotel & Towers** in New York, New York. The project had the support of the New York State Energy and Research Development Authority and the Department of Energy. PPL selected FuelCell Energy, Inc. (FCE) and its fuel cell model DFC®300 for these projects.

Grant agreements were finalized, and a contract between PPL and Pepperidge Farm for the manufacture, installation, and first year's maintenance of the fuel cell was executed on March 17, 2005. A contract between PPL and Starwood for the manufacture, installation and first year's maintenance of the fuel cell was executed on March 3, 2004. As the prime contractor, PPL was responsible for all facets of the project. All the work was completed by PPL through various subcontracts, including the primary subcontract with FCE for the manufacture, delivery, and installation of the fuel cell.

Final installation and field testing at Pepperidge Farm was completed January 16, 2006. Final acceptance of the fuel cell was completed on January 23, 2006. Final installation and field testing at Sheraton New York was completed May 19, 2005. Final acceptance of the fuel cell was completed on May 23, 2005. The fuel cells have operated for more than one year and continue to operate today.

2.0 Name, Address and Related Company Information

PPL EnergyPlus, LLC
Two North Ninth St., GENPL8
Allentown, PA 18101

Contact: Steven A. Gabrielle
Email: sagabrielle@pplweb.com
Phone: 610-774-6866
Fax: 610-774-4198

PPL EnergyPlus, LLC is PPL Corporation's competitive sales and marketing arm. PPL EnergyPlus buys and sells energy in competitive wholesale and deregulated retail markets, and provides energy solutions to businesses, industry, government and institutions. PPL's products and services include wholesale energy marketing, retail energy marketing, natural gas, distributed generation, mechanical services, and energy demand reduction.

3.0 Production Capability of the Manufacturer

FuelCell Energy, Inc. (FCE) is the leading high temperature stationary fuel cell manufacturer and developer of molten carbonate and solid oxide applications. FCE's patented Direct FuelCell (DFC)[™] technology combines high efficiency, low emissions, simplicity and economical cost for stationary power generation. FCE's DFC products are a very efficient and clean means of generating electricity using natural gas and other renewable gaseous fuels.

The fuel cell unit used in this project was a 250KW DFC 300A molten carbonate fuel cell supplied by FCE from its Torrington, Connecticut manufacturing facility. FCE is a world leader in the development and manufacture of high temperature hydrogen fuel cells for clean electric power generation. FCE is a leading fuel cell technology developer for over 30 years with more than \$450 million invested. FCE is headquartered in Danbury, CT with manufacturing facilities in Torrington, CT. FCE built its manufacturing operation with multiple purposes:

- Develop and refine the processes that will lead to large-scale manufacturing.
- Produce fuel cell components, stacks, and modules for commercial field trial by FCE and its partners.
- Produce fuel cells for FCE's ongoing R&D and improvement programs.

FCE's first manufacturing facility in Torrington, Connecticut began operations in 1992. On April 17, 2001 FCE unveiled a new 65,000 square foot manufacturing facility located in Torrington's Technology Park.

DFC300 System Specifications

DFC® 300A

Certified to CARB 2007 Ultra Clean Emissions Standards

Dimensions

Height: 10.5'
Width: 9.0'
Length: 28.0'

Features / Benefits

250 kW net
Ultra clean energy
480 VAC, 50 or 60 Hz
Efficient
By-product heat availability
Easily sited
Modular and scalable
Quiet Operation
Internal fuel reforming
High-quality power
Few moving parts
Small package
Fuel-flexible

Plant Specifications

Power Output: 250 kW
Efficiency (LHV): 47 percent
Heat Rate: 7,260 Btu/kWh

Emissions

Nox: < 0.3 ppmv
Sox: <0.01 ppmv
CO: <10 ppmv
VOC: <10 ppmv

Available Heat

Exhaust Temperature: $\approx 650^{\circ}$ F
Exhaust Flowrate: 3,000 lbs/hr
Exhaust Heat Available: 300,000 Btu/hr

FuelCell Energy, Inc. based in Danbury, Connecticut, developed and manufactures the above high temperature hydrogen fuel cell. FuelCell Energy has a range of products sized from 250 kW to 2 MW, designed for a wide range of customers, including hospitals, universities, hotels, utilities, and wastewater treatment facilities.

6.0 Host Facility Information

Pepperidge Farm
1414 Bluehills Ave.
Bloomfield, CT 06002

Pepperidge Farm built a new 265,000 square foot bakery on a site near Bloomfield, CT. The new plant produces fresh bread products for the New England market segment.

The plant has an electrical load of about 1.5 megawatts. A portion of the electrical load, about 250 kW, is supplied by the on-site Fuel Cell Power Plant. The loads supplied by the fuel cell are round-the-clock loads, such as lighting and certain process loads that result in disruption of operations in the event of an outage. The fuel cell power plant operates using natural gas and will not continue to supply electricity in the event of

a utility outage. In addition to electricity, the fuel cell includes a heat recovery system to produce hot boiler feed water.

Connecticut Natural Gas Corporation provides the bakery with natural gas and Connecticut Power & Light is the bakery's electricity provider.

Host Facility Information

Sheraton New York Hotel & Towers

811 7th Ave. on 53rd
New York, NY 10019

Sheraton New York Hotel & Towers is the flagship hotel for Starwood Hotels & Resorts with 1,748 guestrooms and 1.1 million square feet of space. The hotel uses over 3,000 kW of electric power and a tremendous amount of heat for domestic hot water, space conditioning, and the laundry.

The 250kW fuel cell, located on the fourth floor mezzanine roof overlooking 52nd Street, supplies a portion of the combined heat and power for the hotel. The fuel cell plant is comprised of a 250kW fuel cell, gas compressor, air-to-water heat exchanger and water-to-water heat exchanger.

7.0 Fuel Cell Installation

The **Pepperidge Farm** project was an installation of a 250kW fuel cell. The fuel cell is connected to run in parallel with the grid and will not run in the island mode when the grid goes down. The fuel cell produces 250kW of power and up to 300,000 Btu's of heat. The heat output is connected to the bakery's boiler make-up system. The power from the fuel cell is distributed at 480 volts and connected to one of the five main services feeding the facility.

The key milestones for the installation of the **Pepperidge Farm** fuel cell were:

- Completion of major foundations for fuel cell, heat exchanger and transformer on 8/22/05
- Fuel cell set in place on 9/19/05
- Completion of all mechanical and electrical work on 10/3/05
- Commissioning and startup completed on 10/24/05
- Final Acceptance—1/16/06

Pre-installation work included: power monitoring, soil testing, natural gas testing and potable water testing. NK Engineers of Monroe, Ct. was selected as the engineering design group. Millennium Builders, Inc. of Rocky Hill, Ct., selected as the general construction contractor. An on-site construction kick-off meeting was held on July 15, 2005. The fuel cell, heat exchanger and transformer were set in place on November 19, 2005. The equipment is located on the south side of the facility adjacent to the product loading stations outside of the boiler room. The electric meter was installed between the fuel cell and the switchgear the fuel cell is feeding. A study of the on-site loads showed most, if not all, of the power produced would be used by Pepperidge Farm. There was little concern about back-feeding to the grid. In addition, there is a reverse power relay installed to prevent any chance of back-feeding. The existing water pressure in the boiler room was adequate to serve the water needs of the fuel cell, so a direct connection was made. Connecticut Natural Gas had a medium pressure gas line installed from the street to the facility. The gas line to the fuel cell was taken from that existing line. The fuel

cell uses natural gas at a pressure of 15 psig at a rate of 35 scfm. The customer decided on a two loop system design (hot water/glycol) for the heat exchanger. Piping and conduit were routed to the fuel cell from the heat recovery boiler underground. From the heat recovery boiler to the heat exchanger, the piping was run above ground through the boiler room wall.

The interconnection was completed by 10/3/05 with commissioning and startup completed by 10/24/05.

Some of the issues encountered during the installation phase were:

- The site is served by a networked electrical system. The utility did not want any reverse power onto the network. A compromise was reached where we installed a reverse power relay set to trip if the reverse power exceeded 50kw.
- The location of the fuel cell was very close to electrical transformers and a sanitary manhole. During excavation for the support pads, piping was encountered and the pad had to be modified to accommodate the obstacle.

Historical average monthly electrical use is illustrated in *Table 2—Monthly Site Parameters—2003*.

There were approximately fifteen weeks of construction with anywhere from one to five contractor personnel onsite on any one day. Over the four month period it is estimated that there were approximately 1300 man hours.

The **Sheraton New York Hotel and Towers** power plant operates in a cogeneration mode, running in parallel with the grid and in island mode when the grid goes down. The fuel cell produces 250 kW of power and up to 300,000 Btu's of heat. The heat output is connected to the hotel's domestic hot water system serving 22 of the 56 floors. The power from the fuel cell is distributed at 480 volts and transformed down to 208 by existing transformers to feed the hotel's loads. The unit is sited next to the 2MW standby generator on the fourth floor mezzanine rooftop offset. Additionally, various electrical and ventilating systems are located on the fourth floor mezzanine rooftop. The rooftop also has two large steel I-beams in place to hold the 2MW generator. PPL hired a structural engineer to inspect the roof, provide engineering direction and create drawings to assure a structurally sound site for the fuel cell. The steel I-beams were reinforced as part of the project. PPL worked closely with Sheraton, the structural engineer and the local construction contractor to insure all structural issues were properly addressed.

The key milestones for the installation of the **Sheraton New York Hotel & Towers** fuel cell were:

- Completion of engineering – 6/4/04
- Permits and approvals acquired by 6/21/04 (except for MEA# from NYC)
- Contracts and licensing in place by 7/30/04
- Equipment delivery completed 11/26/04
- Construction completed by 12/10/04
- Commission - 12/28/04
- Start-up – 5/16/05

Pre-installation work also included: power monitoring, natural gas testing and potable water testing. NK Engineers of Monroe, Ct. was selected as the engineering design group. Trystate Mechanical of Yonkers, was selected as the general construction contractor. An on-site construction kickoff meeting was held on May 28, 2004. The fuel cell, heat exchanger and transformer were set in place on November 10, 2004. The equipment is located on the roof of the fourth floor mezzanine overlooking 52nd Street. The hotel's power is being supplied by three

different services. The electrical connection could not cross between the networked services. The power from the fuel cell was delivered to building loads that were served by the highest loaded service so there would be no chance of back-feeding the network serving the hotel. A reverse power relay was installed to trip the fuel cell off-line if for some reason a reverse power condition was detected. The existing water pressure in the lower portion of the hotel was too low at 20 psig to feed the fuel cell which requires approximately 50 psig for its water connection. The water connection was tied into the system serving the upper floors of the hotel, which had adequate pressure for the equipment. Con Edison installed a new underground gas line from the street to serve the hotel and the fuel cell load. The increased line size was required due to the low pressure gas line in the street. A new line from the service was run to the roof location of the fuel cell. The gas pressure was then boosted to the required pressure utilizing a natural gas compressor system. The fuel cell uses natural gas at a pressure of 15 psig at a rate of 35 scfm. The customer decided on a two-loop system design (hot water/glycol) for the heat exchanger. All piping and conduit were routed to the fuel cell from a mechanical room on the fifth floor across the roof structure supporting the equipment.

The interconnection was completed by December 10, 2004 with commissioning completed by December 28, 2004 and start-up on May 16, 2005.

Some of the issues encountered during the installation phase were:

- The scheduling of equipment deliveries due to the requirement of closing down the street in Manhattan to rig to the fourth floor roof.
- Correction of the structural support system on the roof which had to be done after the equipment was rigged into place the first time.
- The permitting of the fuel cell equipment. Any equipment installed in Manhattan needs to have the approval of the code officials (MEA Number) prior to being installed. This was one of the reasons for the delay in the final start up of the equipment.

Historical average monthly electrical use is illustrated in *Table 2—Monthly Site Parameters—2003*.

There were approximately nineteen weeks of construction with anywhere from one to five contractor personnel onsite on any one day. Over the four and a half month period, it is estimated that there were approximately 1800 man hours.

The Sheraton New York Hotel and Towers power plant operates in a cogeneration mode, supplying electricity and heat to half of the fifty six story tower. The unit is sited next to the 2MW standby generator and feeds power into the equipment serving the lighting on the upper floors of the hotel. The power plant supplies about 10 percent of the daily electrical power and hot water requirements for the hotel.

8.0 Electrical System

The 250-KW DFC 300A fuel cell power plant at **Pepperidge Farm** is operated in parallel with the local electrical grid. Connecticut Light & Power (CL&P) is the primary power source for the site. The fuel cell is electrically connected to Pepperidge Farm's 480V system at one of the main switchgear buses, which is ultimately connected to the CL&P power grid at the main electric meter for the site. CL&P had a standardized electrical interconnection for all distributed generation projects, such as this fuel cell, that were under 5 MW in capacity. The interconnection process went relatively smooth with a reasonable review and comment period from CL&P on all interconnection issues and relay settings.

As part of the interconnection application, PPL had to designate whether excess power from the fuel cells would be exported from the site. Pepperidge Farm elected to obtain interconnection service from CL&P that did not allow for export electric sales. The small amount of power (up to 50kw) that might be reversed into the networked system serving the site would be used elsewhere on the site before entering the grid at the main meter location.

The DFC 300A fuel cell is designed to allow for connection to critical loads and operation in "backup" mode when the power grid is not available. Pepperidge Farm did not connect any critical loads into the fuel cell during the first year of installation.

The 250-KW DFC 300A fuel cell power plant at the **Sheraton New York Hotel & Towers** is operated in parallel with the local electrical grid. Consolidated Edison (ConEd) is the primary power source for the site. The power from the fuel cell is distributed at 480 volts and transformed down to 208 volts by existing transformers to feed the hotel's loads. The unit is sited next to the 2MW standby generator on the fourth floor mezzanine rooftop offset. Additionally, various electrical and ventilating systems are located on the fourth floor mezzanine rooftop. The interconnection process went relatively smooth with a reasonable review and comment period from ConEd on all interconnection issues and relay settings.

The hotel's power is being supplied by three different services. The electrical connection could not cross between the networked services. The power from the fuel cell was delivered to building loads that were served by the highest loaded service so there would be no chance of back feeding the network serving the hotel. A reverse power relay was installed to trip the fuel cell off line if for some reason a reverse power condition was detected.

The DFC 300A fuel cell is designed to allow for connection to critical loads and operation in "backup" mode when the power grid is not available. Sheraton connected equipment serving the lighting on the upper floors of the hotel into the backup feature of the fuel cell.

9.0 Thermal Recovery System

Two natural gas fueled boilers provided the primary source of heating and process steam at the **Pepperidge Farm** facility. As part of the project, the boiler make-up water line was extended to run through a double wall shell and tube heat exchanger. The shell side of the heat exchanger utilizes a glycol mixture to transfer the heat from the fuel cell's heat recovery unit (HRU) to the make-up water system. The exhaust from the fuel cell unit is ducted to a Cain HRU to capture the thermal energy in the exhaust. The recoverable thermal energy from the DFC 300A fuel cell power plant can be up to 0.3 mmBTU per hour (mmBTU/hr). Therefore, the fuel cell heat recovery system is designed to provide a maximum of 0.3 mmBTU/hr of thermal energy to the boiler make-up water system. The fuel cell heat recovery system is designed for continuous operation to provide heat to the make-up water which reduces the amount of steam required to heat the boiler feed water. The fuel cell heat recovery system includes a bypass on the HRU to dissipate heat from the system in the event the fuel cell system is isolated from the facilities water loop for any reason. This feature enables the fuel cell to continue full operation independent of the operation of the heat recovery system. The HRU utilizes a cross-flow configuration with the high temperature exhaust gas passing over coils through which the water flows. In this configuration, relatively cooler water enters the HRU near the gas exit and exits at the front of the HRU near where the hot exhaust from the fuel cell enters the HRU. In this configuration, the temperature difference between the gaseous exhaust and the water in the hot loop remains relatively constant across the length of the HRU, thereby maximizing heat transfer from the gaseous exhaust to the water. Water temperature across the HRU and the radiator is measured through the use of multiple temperature sensors.

At the **Sheraton New York Hotel & Towers** the main heating source is high pressure steam furnished from Con Edison's main underground distribution system. As part of the project, the domestic hot water system serving the upper floor hotel rooms was connected to run through the double wall shell and tube heat exchanger located in the fifth floor mechanical room adjacent to the fuel cell location. The shell side of the heat exchanger utilizes a glycol mixture to transfer the heat from the fuel cell's heat recovery unit (HRU) to the domestic hot water system. The exhaust from the fuel cell unit is ducted to a Cain HRU to capture the thermal energy in the exhaust. The recoverable thermal energy from the DFC 300A fuel cell power plant can be up to 0.3 mmBTU per hour (mmBTU/hr). Therefore, the fuel cell heat recovery system is designed to provide a maximum of 0.3 mmBTU/hr of thermal energy to the domestic hot water system. The fuel cell heat recovery system is designed for continuous operation to provide heat to the domestic hot water, which reduces the amount of steam required to heat the water. The fuel cell heat recovery system includes a bypass on the HRU to dissipate heat from the system in the event the fuel cell system is isolated from the facilities water loop for any reason. This feature enables the fuel cell to continue full operation independent of the operation of the heat recovery system.

The heat recovery systems have worked well during their first year of operation.

10.0 Data Acquisition System

The DFC 300A fuel cell power plant is designed for unattended operation and is monitored remotely by FCE through a telephone connection to FCE's control center located in Danbury, Connecticut. Fuel cell operating parameters such as fuel usage, power output, water consumption, etc., are monitored by the power plant, with data stored locally and uploaded to FCE on a daily basis. The HRU skid is equipped with a meter that monitors continuous, cumulative and peak heat output as well as other thermal parameters. Pepperidge Farm and Sheraton New York Hotel & Towers maintenance personnel also visually inspect all aspect of the fuel cell system each day during their normal course of activities around the boiler room.

11.0 Results & Discussion

This section is included in sections 12 through and including 14.

12.0 Fuel Supply System

The fuel supply system for the fuel cell is designed for maximum flexibility. The fuel cell unit can operate on both pipeline-quality natural gas or biogas if the biogas is properly cleaned up to FCE specifications. Natural gas is the primary fuel for both projects.

At **Pepperidge Farm**, Connecticut Natural Gas, the local utility, ran a gas line capable of sending a minimum of 15 psi natural gas to the fuel cell. Having the proper pressure for natural gas available on-site was important and eliminated the need for a gas booster pump. At the **Sheraton New York Hotel & Towers**, Consolidated Edison, the local utility in New York City, installed a new underground gas line from the street to serve the hotel and the fuel cell load. The increased line size was required due to the low pressure gas line in the street. A new line from the service was run to the roof location of the fuel cell. The gas pressure was then boosted to the required pressure utilizing a natural gas compressor system. Both fuel cells use a carbon bed, a de-sulphurizer and a humidification system to prepare the natural gas for introduction into the fuel cell. All these systems are provided by and delivered by FCE in the fuel cell container.

13.0 Program Costs

A breakdown of the actual project costs for the **Pepperidge Farm** unit includes the following items:

| | |
|--|-----------|
| • System Purchase Cost | \$927,000 |
| • Installation | \$316,433 |
| • Thermal Recovery | \$23,000 |
| • Performance Monitoring & Service Agreement | \$25,000 |
| • Maintenance (labor, materials, etc.) | incl. |
| • Fixed Operating Cost | incl. |
| • Variable Operating Cost (\$/kWh) | incl. |
| • Fuel Costs (\$/Mbtu) | \$9.50 |
| • Local Area Fuel Price | \$142,500 |
| • Local Area Electricity Price (\$/KWh) | \$.014 |
| • Other Costs | |
| ○ Freight | \$10,000 |
| ○ Commissioning/Start-up | incl. |

A breakdown of the actual project costs for the **Sheraton New York** unit includes the following items:

| | |
|--|-------------|
| • System Purchase Cost | \$1,016,670 |
| • Installation | \$570,894 |
| • Thermal Recovery | \$24,050 |
| • Performance Monitoring & Service Agreement | \$90,000 |
| • Maintenance (labor, materials, etc.) | incl. |
| • Fixed Operating Cost | incl. |
| • Variable Operating Cost (\$/kWh) | incl. |
| • Fuel Costs (\$/Mbtu) | \$12.50 |
| • Local Area Fuel Price | \$187,500 |
| • Local Area Electricity Price (\$/KWh) | \$0.017 |
| • Other Costs | |
| ○ Freight | \$20,000 |
| ○ Commissioning/Start-up | incl. |

The Performance Monitoring and Service Agreement from Fuel Cell Energy covers maintenance, fixed operating and variable operating costs. Maintenance includes items such as on-site labor and material provided by Fuel Cell Energy. Fixed Operating Cost includes items such as 24/7 monitoring, 24/7 800 number helpline, engineering upgrades to the fuel cell and scheduled maintenance such as filter and salt changes. Variable Operating Cost includes call-out and response by Fuel Cell Energy technicians for unplanned fuel cell outages.

14.0 Operational Data and Results

Pepperidge Farm's electrical use allowed initially for almost full operation of the fuel cell. There were several instances on Sunday evenings when Pepperidge's load was too low and caused the reverse power relay to operate. To prevent unwanted trips, the fuel cell was operated at slightly lower output (225kW) during some of the test period. The Sheraton fuel cell was also run at a reduced output for a portion of the test period due to high gas prices.

Both fuel cells ran very consistently and at a very high availability factor (89% / 96%) as shown in the table below. The capacity factors for the fuel cells was 84% which was mainly due to the choice of running at a reduced output during the latter part of the test periods for reasons mentioned.

The operating hours, total energy produced, peak and average electric output were derived directly from hourly fuel cell output data. The fuel usage was derived from actual utility bills. The thermal heat recovery numbers were based on sample data from the site and average expected thermal heat recovery based on the design of the HRU system. Electrical efficiency is supplied by the fuel cell manufacturer and thermal efficiency is derived from the thermal heat recovered / gas heat input value. The overall system efficiency shown is 61% for both systems.

| | |

| Jan | 1,606,317 | 2344 | 834 | 26.90 |
| Feb | 1,449,352 | 2304 | 666 | 23.78 |
| Mar | 1,414,737 | 2272 | 850 | 27.42 |
| Apr | 1,770,812 | 2376 | 951 | 31.69 |
| May | 1,232,335 | 2552 | 864 | 27.86 |

Table 6—Sheraton New York Site Parameters During Fuel Cell Installation—2005-2006

The site parameters that changed included a reduction in purchases from the local electric utility of over 1.8 million kWh which was offset by the power generated by the fuel cell. Natural gas purchased for the hotel was reduced by over 11,000 MMBtus due to the thermal heat recovered from the fuel cell.

The following table identifies the Mean Time Between Failure (MTBF), Total Scheduled Outages, Mean Time of Scheduled Outages, Total Unscheduled Outages, and Mean Time of Unscheduled Outages. The date, cause and duration of each outage that occurred during the first year of operation is provided in the second table below.

| Pepperidge Farm Fuel Cell Outages | | Sheraton New York Fuel Cell Outages | |
|--------------------------------------|----------|--|-----------|
| Mean Time Between Failures | 215 hrs. | Mean Time Between Failures | 263 hrs. |
| Total Scheduled Outages | 302 hrs. | Total Scheduled Outages | 76 hrs. |
| MTBF Scheduled Outages | 784 hrs. | MTBF Scheduled Outages | 1040 hrs. |
| Total Unscheduled Outages | 119 hrs. | MTBF Unscheduled Outages | 251 hrs. |
| MTBF Unscheduled Outages | 244 hrs. | MTBF Unscheduled Outages | 351 hrs. |

Table 7—Fuel Cell Outages

The most common cause of the outages was grid interruptions from the local utility (designated as "Grid" on the chart below). Grid disturbances may include local lightning storms, line switching, a pole accident or other unexplainable outages or fluctuations in the grid that cause the fuel cell to trip. There were also some gas compressor issues at the Sheraton New York.

PPL EnergyPlus, LLC certifies that all the activities as noted in this report years of 2005 to 2007 are complete.

15.0 Milestones/Improvements/Lessons Learned

The fuel cell installation at **Pepperidge Farm** had several milestones that were achieved during the first year of operation:

- First installation of a 250 kW fuel cell demonstration project at a large bakery/manufacturer in Connecticut
- Laid the ground work for a potential second 1.5 MW fuel cell at the same site. This project allowed Pepperidge to better understand how a fuel cell operates and can be integrated with their 24/7 operating facility.
- Demonstration of running the fuel cell at various load levels to maximize the output of the fuel cell while avoiding nuisance trips from the reverse power relay.

Several improvements and modifications PPL learned through this demonstration:

- The need to monitor the on-site loads on an ongoing basis when the customer's load closely matches the output of the fuel cell. As the fuel cell does not load follow, the fuel cell output must be set to the maximum output but not at a level that causes reverse power relay trips
- The need to closely assess and monitor on-site electric and thermal use for a potential fuel cell client to assure the fuel cell operates as efficiently as possible while not causing reverse power relay trips
- The use of a high speed broadband connection for quick, instant access to the fuel cell is much more useful than slower dial-up connections. This helps with monitoring and troubleshooting the fuel cell remotely and saves from the cost of sending out a technician unnecessarily

Several lessons learned from the installation of this demonstration project at Pepperidge Farm include

- The need to understand all the local zoning and permitting requirements. Connecticut had a state specific process that involved the siting council. This council had to provide approval of the project before it could proceed.
- Siting the fuel cell near a location where power and heat can be readily connected into the bakery's utility system are key to a successful project. The fuel cell with the heat recovery unit occupies a relatively small area and the fuel cell is very quiet and clean, which allows it to be sited very close to buildings.
- Installation costs can be reduced if land near the utility connections is available and is relatively clear from obstructions, both above and underground. The overall close location of the fuel cell site to the building's boiler room greatly reduced installation costs which could have involved long electric and thermal pipe runs or significant ground work.
- Installation of the fuel cell also involves close coordination with all suppliers and local trades to assure success. The fuel cell project can easily run into cost overruns if the project is not managed properly.
- The operation of the fuel cell was spearheaded by FuelCell Energy, the fuel cell supplier. FCE entered into a service agreement with PPL that allowed FCE to monitor the fuel cell 24 hours a day and dispatch technicians as needed for routine and non-routine maintenance. PPL used its own technicians for all equipment outside of the fuel cell. This was the best case scenario for PPL who did not want to train its on-site maintenance personnel on how to operate the fuel cell. The fuel cell is a complex power plant that needs special and ongoing training to assure successful operation.

The fuel cell installation at **Sheraton New York Hotel & Towers** had several milestones that were achieved during the first year of operation:

- First installation of a 250 kW fuel cell demonstration project in New York City, near Times Square
- A ribbon cutting ceremony to promote the installation of this leading edge technology with local city officials, the community and the state of New York
- The ability for Starwood Hotels and the Sheraton brand to promote themselves as a clean and green energy corporation who is taking the lead among their peers with clean energy choices. Starwood won several energy awards as a result of their fuel cell efforts with PPL
- The demonstration of the fuel cell's ability to act as a backup power source with several levels of the hotel connected to the critical or backup bus on the fuel cell
- The first time a DFC300A fuel cell has been installed on a building structure instead of on the ground

Several improvements and modifications PPL learned through this demonstration:

- The ability to connect critical loads at a site that are on all the time and do not fluctuate too much over time
- The need to closely assess and monitor on-site electric and thermal use for a potential fuel cell client to assure the fuel cell operates as efficiently as possible
- The use of a high speed broadband connection for quick, instant access to the fuel cell is much more useful than slower dial-up connections. This helps with monitoring and troubleshooting the fuel cell remotely and saves from the cost of sending out a technician unnecessarily

Several lessons learned from the installation of this demonstration project at Sheraton include:

- The need to understand all the permitting requirements, especially in New York or other large cities. The MEA# which was essentially a number issued by the NY fire department took many months to obtain as this was the first fuel cell of its type in New York City. This process and the amount of time it would take was not understood during the early stages of this project.
- Siting the fuel cell near a location where power and heat can be readily connected into the hotel's utility system are key to a successful project. The fuel cell with the heat recovery unit occupies a relatively small area and the fuel cell is very quiet and clean, which allows it to be sited very close to buildings.
- Space is very limited in New York City. A location that can fit the fuel cell and heat exchanger and can support the 90,000 pound weight is the first part of the process.
- Installation of the fuel cell also involves close coordination with all suppliers and local trades to assure success. The fuel cell project can easily run into cost overruns if the project is not managed properly. New York City has many rules, and cost overruns on this project were mitigated by using local contractors.
- Natural gas is typically at lower pressures in New York City, and the entire utility infrastructure is very old. You need to hire local engineers who understand how to work in the city and with the local utility in order to assure project success.

16.0 Conclusions/Summary

Pepperidge Farm and Starwood's Sheraton New York Hotel and Towers partnered with PPL EnergyPlus to embark on this endeavor to install the two 250 kW DFC300A fuel cells from FuelCell Energy. The success of the Pepperidge Farm project was also supported by the Connecticut Clean Energy Program and the Department of Energy through the Department of Defense's fuel cell buy down program. The success of the Sheraton New York project was also

supported by the New York State Energy and Research Development Authority and the Department of Energy through the Department of Defense's fuel cell buy down program.

Pepperidge Farm's main goals for this project were:

- Manage energy costs
- Exercise environmental leadership
- Leverage innovative technologies

Starwood's Sheraton New York's main goals for this project were:

- Be an energy leader among its peers
- Manage energy costs
- Provide backup power for the hotel

All the goals were successfully met through the installation of the fuel cells. Energy costs were controlled, innovative solutions were incorporated and both companies became energy leaders in their industries.

Pepperidge Farm and Sheraton New York also exercised environmental leadership by installing leading edge 250 kW molten carbonate fuel cell. These fuel cells represented the newest available fuel cell technology at the time.

This demonstration project was a true success to Pepperidge Farm and Sheraton New York and to the promotion of fuel cell technology for generations to come.

RE: Fuel Cell Buy-down 42022

Dear Ms. Toth:

PPL respectfully requests an amendment to its \$500,000 grant agreement for the installation of two 250 kW molten carbonate fuel cells at Pepperidge Farm in Bloomfield, CT (copy attached).

PPL still intends to install two fuel cell units under this award but with one unit to be installed at Pepperidge Farm in Bloomfield, CT and the second unit to be installed at the Sheraton New York Hotel & Towers in New York City. Our previous request on February 17, 2005 to install the second fuel cell unit at the Sheraton Stamford Hotel did not come to fruition due to uncertainties from the hotel owner about the potential future sale of the property. The NY State Energy Research & Development Authority (NYSERDA) has committed state funding of the NY project and the hotel owner, Starwood Hotels, has signed a contract with PPL to install the 250 kW fuel cell.

The Sheraton NY Hotel & Towers fuel cell project will fit within the timetable of the current 42022 award project period.

Please confirm the acceptance of this amendment to:

- allow for \$250,000 of the approved grant to be applied to the second fuel cell that will be sited at the Sheraton New York Hotel & Towers in New York City, NY

Please feel free to call me at 610-774-7095 with any further questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Steve Gabriella", written over a horizontal line.

Shawna,

Thanks for the response.

Yes. PPL will comply with these conditions.

Sincerely,
Steve

Steve,
Attached is the response from DoD. Please send an email back stating whether or not you comply with DoD's conditions..."as long as the reporting reflects the changes and the demonstration proceeds as described in the original agreement."

Thanks,
Shawna

Appendix 2 – List of Acronyms and Abbreviations

BOP KW – load in kW of the balance of the plant
Btu. – British thermal unit
cbUnit – unit number
CO – carbon monoxide
COMBO64 – designation to show plant status
dc – direct current
DFC – Direct FuelCell
DOD – Department of Defense
DOE – Department of Energy
EPM – Electric Power Meter
FC-217 PV – Process Value for Flow Control_217, used to regulate/measure natural gas flow
FCE – FuelCell Energy, Inc.
FS – Field Service
gpm – gallons per minute
GTAC – Global Technical Assistance Center
HMI – **HRU** – heat recovery unit
Hot s – Hot Standby
HSBT – typo in report should be HSBY
HSBY – Hot standby
Hz – Hertz
I&C – Intrumentation and controls
kW – kilowatts
kWe – kilowatt equivalent
kWh – kilowatts per hour
lb/hr. – pounds per hour
LHV – low heating value
MCFC – molten carbonate fuel cell
MMbtu – million British thermal units
MTBF – mean time between failure
MW – megawatts
N₂ – nitrogen
Nox – nitrous oxide
Other D BOP – shows reading at balance of plant
OtherD CCB – shows reading at critical customer circuit breaker
OtherD Inverter – shows reading at inverter (Inverter=PCU, which is Power Condition Unit)
OtherD TB – shows reading at Tie Breaker
PC – personal computer
PCU AC KW – Gross power output in kW from inverter
Power opps – Power Operations
PPL – PPL EnergyPlus, LLC
ppmv – parts per million by volume
psig – pounds per square inch
pt – pressure transmitter
QSIA – conductivity meter
R&D – research and development

RO – reverse osmosis
scfm – standard cubic foot per minute
Sox – sulfur oxide
TBKW – Tie-breaker kilowatts
TD_0368 – incell differential temperature
TS&R – trouble shoot and repair
V – volt
VAC – volt alternative current
Voc – volatile organic compound
vs – versus
WTS – water treatment system

Account Messages

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

***On August 4, 2004, the Department of Public Utility Control authorized CL&P to refund nearly \$89 million to customers related to amounts previously collected through the Competitive Transition Assessment (CTA) on your bill. The CTA is intended to recover restructuring-related "stranded costs". Refunds, labeled "CTA Refund" on your bill, will be made over the seven month period from Oct. 2004 to April 2005.

**The Energy Adjustment Clause charge line item listed in the Supplier Services Detail section of your bill reflects a portion of the cost of procuring energy from CL&P's wholesale suppliers.

- DISTRIBUTION DEMAND BASED ON RATCHET

Check Processing: Paying by check authorizes CL&P to use the check information to create an electronic payment and deduct the amount from your checking account on the day it is received. Your original check will be destroyed. An exact image of your check will be kept on our files for two years. If the payment cannot be processed electronically, a check can be recreated and used in place of the original for payment.

Account Messages

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

***Though originally scheduled to end in April 2005, the Department of Public Utility Control (DPUC), on December 22, 2004, authorized CL&P to refund nearly \$73 million to customers related to anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2005 CTA Refund" on your bill, will now continue through December 2005. The CTA is intended to recover restructuring-related "stranded costs".

**The Energy Adjustment Clause charge line item listed in the Supplier Services Detail section of your bill reflects a portion of the cost of procuring energy from CL&P's wholesale suppliers.

- METER NUMBER 86510613 REPLACED BY 89043133.

- DISTRIBUTION DEMAND BASED ON RATCHET

Check Processing: Paying by check authorizes CL&P to use the check information to create an electronic payment and deduct the amount from your checking account on the day it is received. Your original check will be destroyed. An exact image of your check will be kept on our files for two years. If the payment cannot be processed electronically, a check can be recreated and used in place of the original for payment.

Account Messages

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

***Though originally scheduled to end in April 2005, the Department of Public Utility Control (DPUC), on December 22, 2004, authorized CL&P to refund nearly \$73 million to customers related to anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2005 CTA Refund" on your bill, will now continue through December 2005. The CTA is intended to recover restructuring-related "stranded costs."

**The Energy Adjustment Clause charge line item listed in the Supplier Services Detail section of your bill reflects a portion of the cost of procuring energy from CL&P's wholesale suppliers.

Account Messages

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

***Though originally scheduled to end in April 2005, the Department of Public Utility Control (DPUC), on December 22, 2004, authorized CL&P to refund nearly \$73 million to customers related to anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2005 CTA Refund" on your bill, will now continue through December 2005. The CTA is intended to recover restructuring-related "stranded costs."

**The Energy Adjustment Clause charge line item listed in the Supplier Services Detail section of your bill reflects a portion of the cost of procuring energy from CL&P's wholesale suppliers.

Account Messages

Because your billing period spans a change in the rates, your usage has been calculated partly on the old rate and partly on the new rate.

**The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.*

***The Department of Public Utility Control (DPUC), on December 28, 2005, authorized CL&P to refund nearly \$148 million to customers related to the anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2006 CTA Refund" in the Delivery Services Detail section of your bill, will be higher during the first three months of 2006 and will continue at a lower rate through December 2006. The CTA Charge is intended to recover restructuring-related "stranded costs."*

****The Department of Public Utility Control (DPUC), on December 28, 2005, authorized CL&P to collect the Transmission Adj. Clause (TAC) charge listed in the Delivery Services Detail section of your bill. The TAC reflects transmission costs approved by the Federal Regulatory Energy Commission (FERC).*

*--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.*

- DISTRIBUTION DEMAND BASED ON RATCHET

NOTICE ...

The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden).

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

***The Department of Public Utility Control (DPUC), on December 28, 2005, authorized CL&P to refund nearly \$148 million to customers related to the anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2006 CTA Refund" in the Delivery Services Detail section of your bill, will be higher during the first three months of 2006 and will continue at a lower rate through December 2006. The CTA Charge is intended to recover restructuring-related "stranded costs."

--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

- DISTRIBUTION DEMAND BASED ON RATCHET

NOTICE ...

The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

***The Department of Public Utility Control (DPUC), on December 28, 2005, authorized CL&P to refund nearly \$148 million to customers related to the anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2006 CTA Refund" in the Delivery Services Detail section of your bill, will be higher during the first three months of 2006 and will continue at a lower rate through December 2006. The CTA Charge is intended to recover restructuring-related "stranded costs."

--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

NOTICE ...

The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

Summary of Previous Charges/Credits

Previous Balance Jun 29 \$47,901.12
Balance Forward \$47,901.12

Summary of New Charges/Credits

Late Payment Charge \$479.01
Supplier Services \$43,315.82
Delivery Services \$9,365.89
Total New Charges \$53,160.72

AMOUNT NOW DUE \$101,061.84

Did you forget? Your balance is past due. If you have paid, thank you.

*The 'Balance Forward' includes \$38,988.65 supplier charges for TRANSITIONAL STANDARD OFFER / CL&P.

The "Amount Now Due" must be received by AUG 28, 2006, to avoid a 1.00% late payment charge.

-On holidays such as Independence Day, July 4, CL&P does not perform non-emergency services. To report a power outage or other emergency, call 1-800-286-2000 or 860-947-2000 in Hartford/Meriden.
-When you shift use of appliances to after 8 p.m., you help reduce the strain on the state's electric system. "Wait till 8" to do laundry, start the dishwasher or run the pool pump.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as:

"Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

***The Department of Public Utility Control (DPUC), on December 28, 2005, authorized CL&P to refund nearly \$148 million to customers related to the anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2006 CTA Refund" in the Delivery Services Detail section of your bill, will be higher during the first three months of 2006 and will continue at a lower rate through December 2006. The CTA Charge is intended to recover restructuring-related "stranded costs."

—*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

—**The Energy Adjustment Clause charge line item listed in the Supplier Services Detail section of your bill reflects a portion of the cost of procuring energy from CL&P's wholesale suppliers.

NOTICE ...

The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden).

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

***The Department of Public Utility Control (DPUC), on December 28, 2005, authorized CL&P to refund nearly \$148 million to customers related to the anticipated over collections of the Competitive Transition Assessment (CTA) charge component of your bill. These refunds, labeled "2006 CTA Refund" in the Delivery Services Detail section of your bill, will be higher during the first three months of 2006 and will continue at a lower rate through December 2006. The CTA Charge is intended to recover restructuring-related "stranded costs."

---Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

- DISTRIBUTION DEMAND BASED ON RATCHET

NOTICE ...

The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

- DISTRIBUTION DEMAND BASED ON RATCHET

Notice: The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

PLEASE NOTE

2006 CTA Refund - On December 28, 2005, the Department of Public Utility Control authorized CL&P to refund nearly \$148 million to customers related to anticipated over-collections of the Competitive Transition Assessment. Effective August 2, 2006, you will no longer see this line item on your bill because these over-collections have been fully reimbursed.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuándo quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as:

"Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

- DISTRIBUTION DEMAND BASED ON RATCHET

Notice: The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

---Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

- DISTRIBUTION DEMAND BASED ON RATCHET

Notice: The most recent competitive auction for Transitional Standard Offer Service resulted in higher prices for energy due to substantial increases in fossil fuel costs. These increased costs will be reflected in bills starting in January 2006.

If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

—The Energy Adjustment Clause charge line item listed in the Supplier Services Detail section of your bill reflects a portion of the cost of procuring energy from CL&P's wholesale suppliers.**

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

—Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as:

"Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

--*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

Your Energy provider for the next billing period will be: CL&P - LAST RESORT GENERATION SERVICE

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as:

"Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

---*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.

Account Messages

Ready when you are! Pay a bill, make a payment plan, check your account, report an outage and more round the clock. Call 800-286-2000 (860-947-2000 in Hartford/Meriden.)

¡Cuando quiera. Pague una cuenta, establezca un plan de pagos, revise su cuenta, informe sobre un corte de energía y más. Las 24 horas del día. ¡Llame al 800-286-2000 (860-947-2000 en Hartford/Meriden) y presione 7 hoy mismo.

Your Energy provider for the next billing period will be: CL&P - LAST RESORT GENERATION SERVICE

*The Competitive Transition Assessment we collect is owned partly by CL&P Funding, LLC and partly by the State of Connecticut.

**The Combined Public Benefits Charge represents a combination of three charges formerly known as: "Conservation and Load Mgmt Charge, Renewable Energy Investment Charge, and Systems Benefits Charge."

—*Effective January 1, 2006, the Generation Services Charge (GSC) and Energy Adjustment Clause (EAC) charge have been combined into the GSC/EAC Charge listed in the Generation Services Rate section of your bill. This line item reflects most of the cost of procuring energy from CL&P wholesale suppliers. The EAC portion of this line item is \$.03533/kWh. If you multiply this EAC rate by the number of kWhs on your bill, you can calculate the dollar amount associated with the EAC. For Rates 115, 116, and 117, the GSC and the EAC charges will remain as separate line items and reflect most of the cost of procuring energy from CL&P wholesale suppliers.
